Important note: When you edit this page, you agree to release your contribution into the **public domain**. If you don't want this or can't do this because of license restrictions, please don't edit. This page is one of the *Public Domain Help Pages*, which can be freely copied into fresh wiki installations and/or distributed with Foresight Wiki software; see Help:Contents for an overview of all pages.

The default sidebar on the left, see the fifth link from top

The **random page** feature allows users to view a wiki page at random. The default, and most convenient use is to show a random page in the main namespace, and is accessed through the Special:Random page. Users will be redirected to the selection.

Special:Randompage is an alias for the feature and works in the same manner.

Namespace selection

Users can also opt to view a random page in a namespace of their choice. This is achieved by specifying a namespace as a parameter to the page, i.e. Special:Random/Help will select a random page in the Help namespace; Special:Random/Category will show the contents of a random category, etc.

Settings

- $wgContentNamespaces - this will set what namespaces should be counted as article content and included in Special:Random function
- $wgExtraRandompageSQL - this settings allows for filtering of content from the Special:Random function
