Usage

Guts:

Sets foreground and background colors of a given text. They can be specified by name or in the format #ddddd (RGB hex triplet).

Unless in the case of personal use on a user page, use this template with great caution:

- a poor contrast may make the text difficult or impossible to read
- the contrast can be experienced as even poorer in the case of color blindness
- links have a color according to user settings; they become invisible if this color is equal to the background color.
